

# To use step method for ÷

$$65 \div 5 = 13$$

## Steps to Success:

1) Make sure your work is set out neatly

2) Write the big number first

3) Subtract 10x the number you are ÷ underneath

4) Subtract a further multiple of the number you are ÷

5) Add together the multiples to find final ÷

$$\begin{array}{r} 65 \\ - 50 \\ \hline 15 \\ - 15 \\ \hline 0 \end{array} \quad \begin{array}{l} (5 \times 10) \\ (5 \times 3) \end{array}$$

$$65 \div 5$$

---

65 60 55 50 45 40 35 30 25 20 15 10 5 0

We are taking away 5 each time. And we can do it \_\_\_\_ times.

$$\begin{array}{r}
 65 \\
 - \underline{50} \quad (5 \times 10) \\
 15 \\
 - \underline{15} \quad (5 \times 3) \\
 0
 \end{array}$$

Lets do one together:

$$56 \div 4$$

Steps to Success:

- 1) Make sure your work is set out neatly
- 2) Write the big number first
- 3) Subtract 10x the number you are  $\div$  underneath
- 4) Subtract a further multiple of the number you are  $\div$
- 5) Add together the multiples to find final  $\div$

Lets do one together:

$$57 \div 3$$

Steps to Success:

- 1) Make sure your work is set out neatly
- 2) Write the big number first
- 3) Subtract 10x the number you are  $\div$  underneath
- 4) Subtract a further multiple of the number you are  $\div$
- 5) Add together the multiples to find final  $\div$

Lets do one together:

$$45 \div 4$$

Now try  
these:

$$1) 26 \div 2$$

$$2) 75 \div 5$$

$$3) 48 \div 3$$

$$4) 62 \div 4$$

$$5) 79 \div 6$$

Steps to Success:

1) Make sure your work is set out neatly

2) Write the big number first

3) Subtract 10x the number you are  $\div$  underneath

4) Subtract a further multiple of the number you are  $\div$

5) Add together the multiples to find final  $\div$

# To use step method for $\div$

$$65 \div 5 = 13$$

## Steps to Success:

1) Make sure your work is set out neatly

2) Write the big number first

3) Subtract 10x the number you are  $\div$  underneath

4) Subtract a further multiple of the number you are  $\div$

5) Add together the multiples to find final  $\div$

$$\begin{array}{r}
 65 \\
 -50 \quad (5 \times 10) \\
 \hline
 15 \\
 -15 \quad (5 \times 3) \\
 \hline
 0
 \end{array}$$

13

Try these: 1)  $65 \div 5$    2)  $36 \div 2$    3)  $42 \div 3$    4)  $90 \div 5$

5)  $102 \div 6$    6)  $112 \div 8$    7)  $96 \div 4$    8)  $67 \div 3$  (needs remainder)
