Shadows

From which direction do you think the light is coming?

Shadows

Shadows

What about in these pictures?

What about in these pictures?

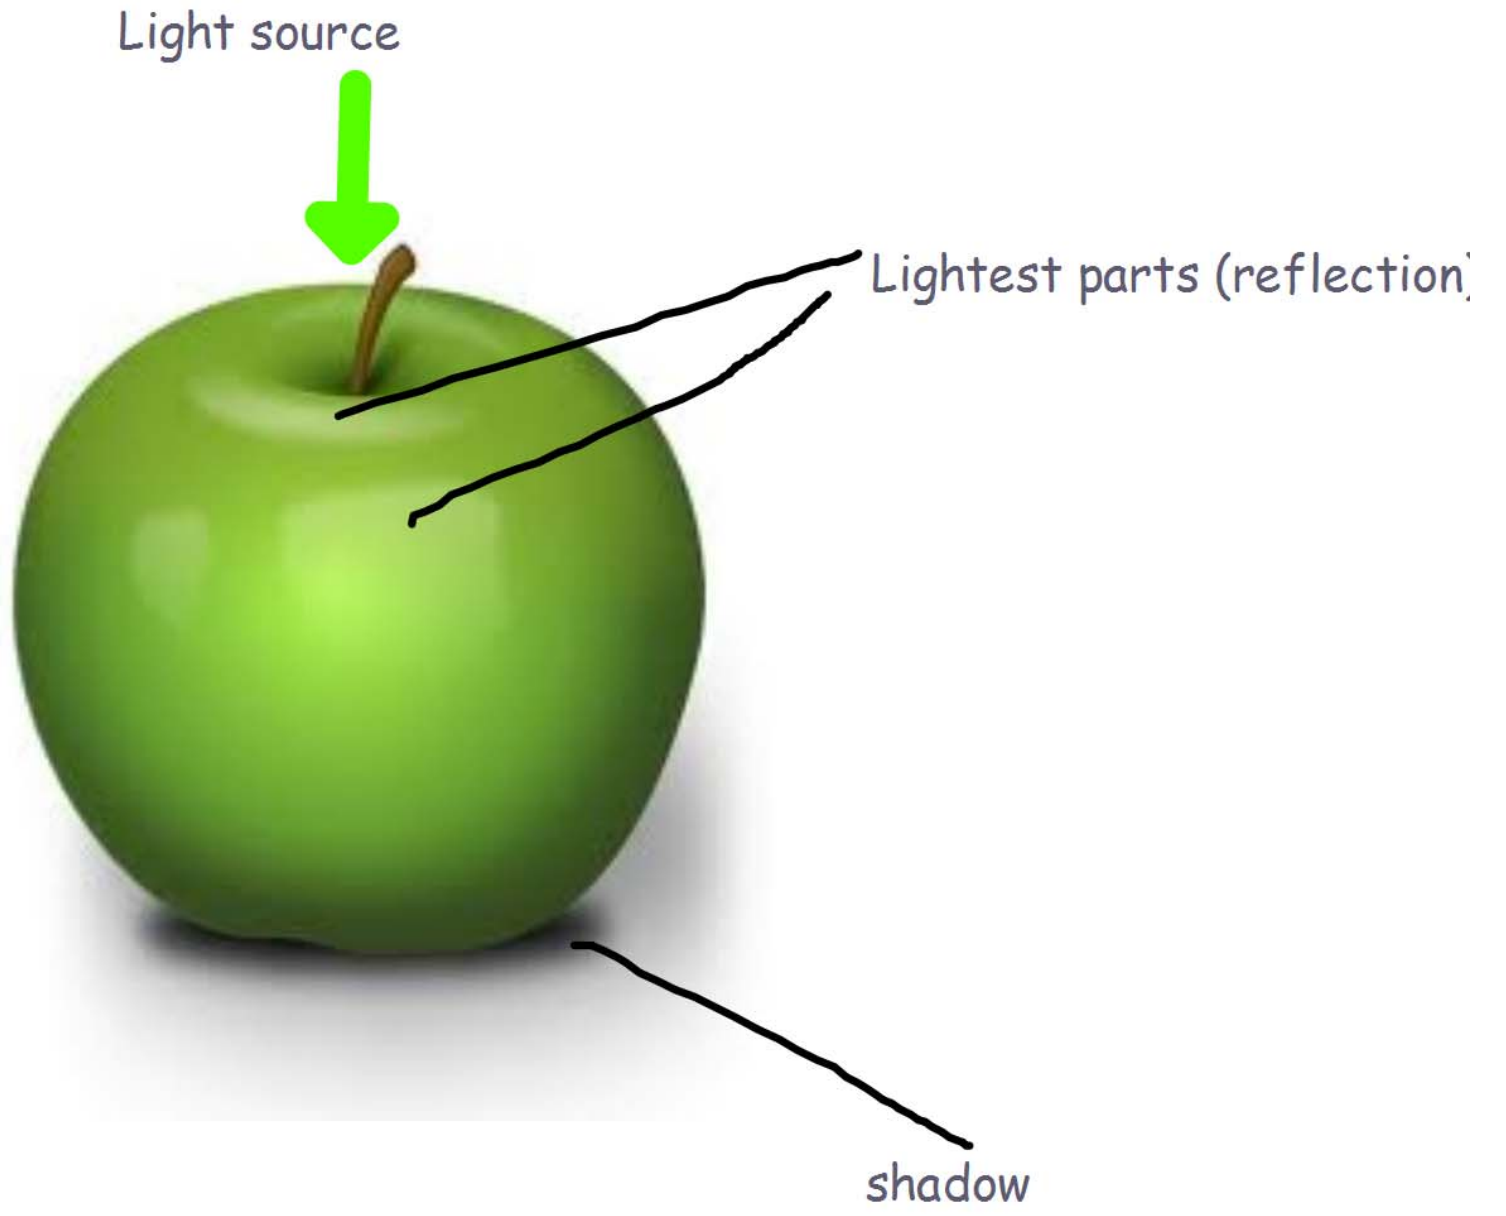

This is where the darkest area is, the shadow, where the light source is blocked.

Notice that here is the lightest part where it reflects the light.

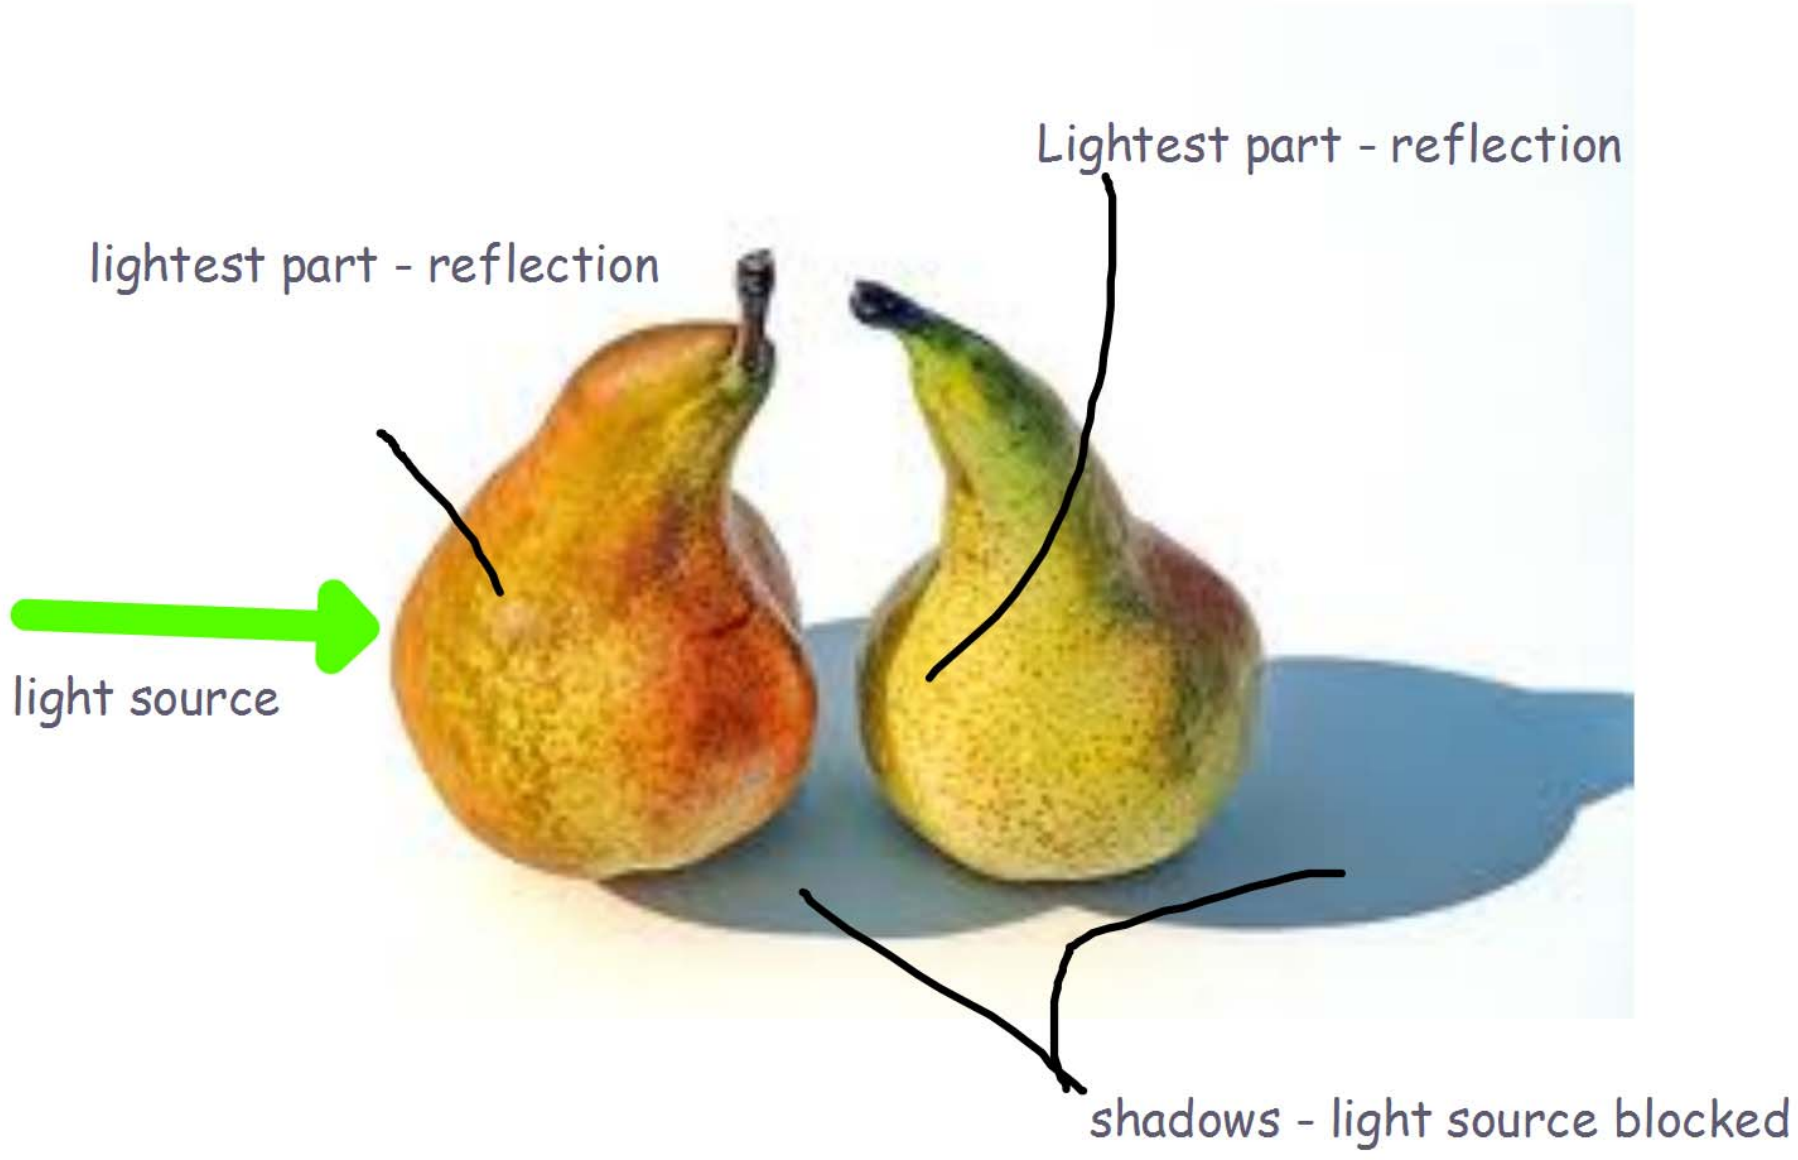

Light Source

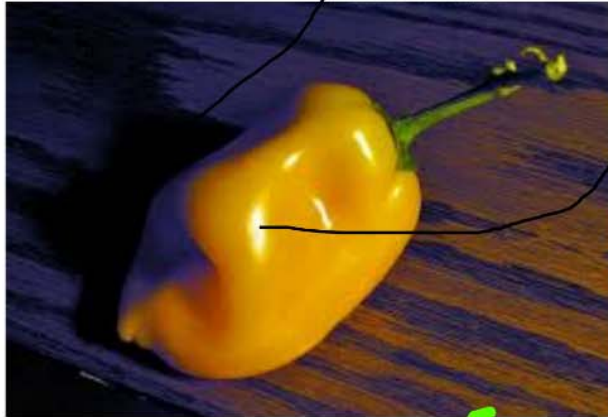

In pairs, on these pictures, draw an arrow where the light source is, where the reflections are (lightest parts), and the shadow (where the light source is blocked).

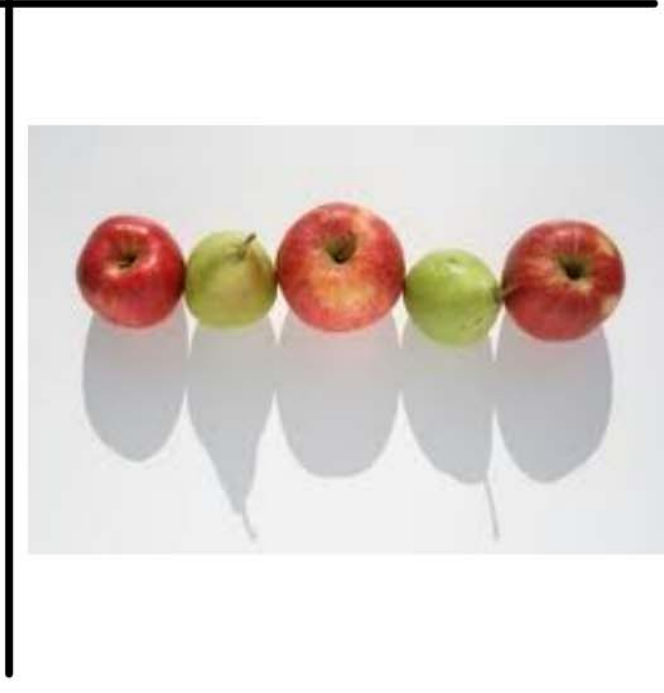

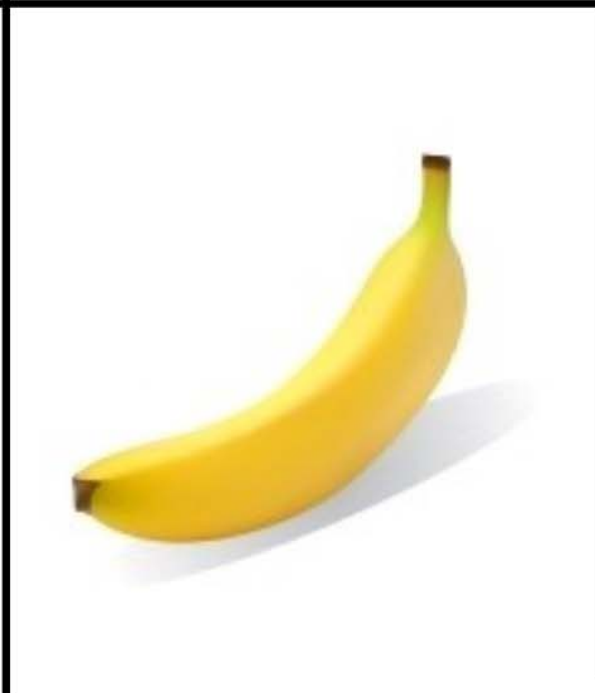

What about in these pictures?

This is where the darkest area is, the shadow, where the light source is blocked.

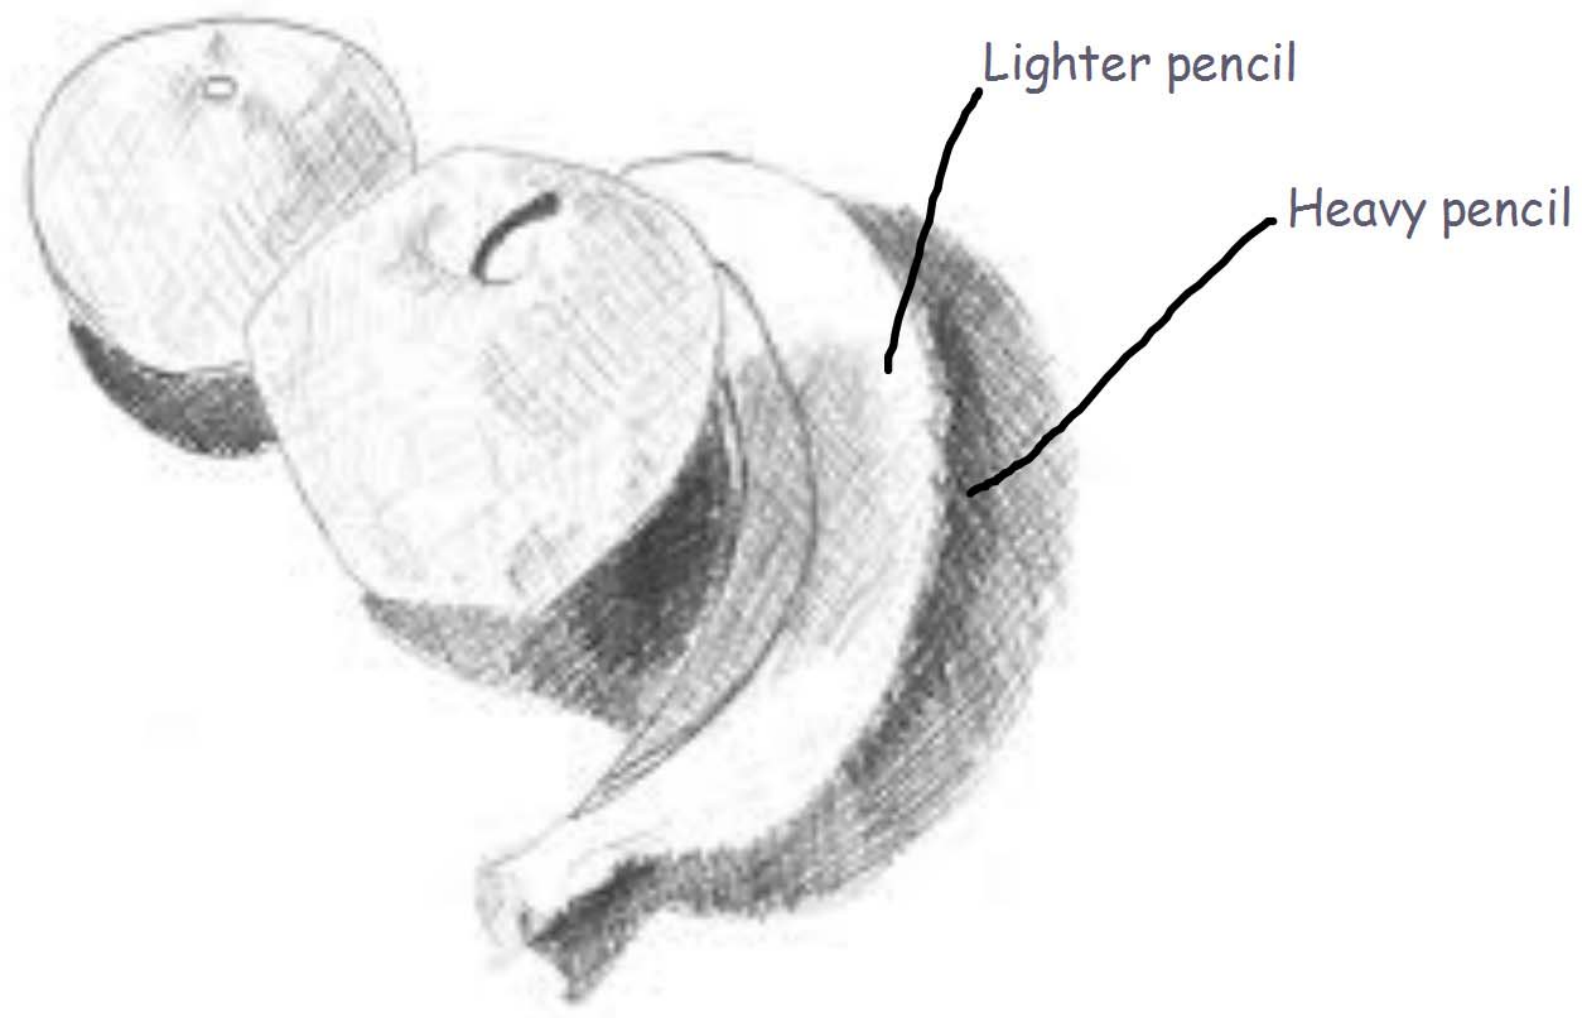

Notice that here is the lightest part where it reflects the light.

Light Source

The following pages show line drawings of fruit. Notice how the artist has used heavy and lighter lines to show the difference in light.

This style is simpler. There is no heavy or lighter pencil use, but the artist is careful where to put the lines to show shadow.

This has obviously taken a lot of time and care!

Take a piece of plastic fruit or vegetable.

Think about where the light source is coming from.

Where are the light parts (reflections)?

Where are the shadows (darker parts)?

Try drawing the object.

Then repeat it trying to improve on the last one.

With the last picture, try to add colour as well as reflection and shadow.
