## To choose correct operation for equations

## Steps to Success:

- 1) Look carefully at the answer
- 2) If it is bigger than the numbers in the question, then it is probably + or x.
- 3) If it is smaller, it is probably ÷ or -

Vocabulary
Operation (+ - ÷ x)
Equation

Try to work out the equations for these sequences. Test it by replacing n with the number in the sequence:

TIPS: Work out the multiplication steps first (in brackets), then if it is - or +.

Replace the shape with the missing information. Write the missing information in your books in a different colour.

$$1)8 - 4 = 4$$

2) 
$$15 \triangle 3 = 5$$

$$3)12 49 = 21$$

$$4) 16 4 = 4$$

5) 
$$46 \triangle 20 = 26$$

9) 
$$12 \times 4 = 36$$

11) 
$$60 \triangle 12 = 5$$

13) 
$$\triangle \times 5 = 35$$

16) 
$$\triangle \div 5 = 8$$

$$18) \triangle + 40 = 130$$

19) 
$$\triangle \times 6 = 66$$

$$(20) \land (x 8 = 56)$$

$$(21) \triangle \div 12 = 12$$

Now check your answers with a calculator
