**1 got his/her FIRST certificate!!!**

# Mars Award

Moons	2
Diameter	4,200 miles
Distance from Sun	142 million miles
Time to Orbit Sun	687 days

Named after the Roman god of war and farming. Mars probably once had water and is the nearest planet that we might one day live on. However, it has little atmosphere (air) left.

**7** got his/her **SEVENTH** certificate!!!

# Meteorite Award

Meteorites are pieces of space rock that reach our atmosphere. Mostly they burn as they go through our air at high speed (25,000 mph). These are sometimes called shooting stars. Some make it to the ground and we can study them to learn about space. Many scientists think a large meteorite hitting Earth may have started the end for the dinosaurs.

14 got his/her **FOURTEENTH** certificate!!!
